

## Where is my bus?

Union City Transit has implemented a GPS/AVL (Global Positioning System and Automatic Vehicle Location) technology to track its vehicles. This will allow for better operations management for dispatching purposes and provides real-time arrival data for passengers via their mobile phones or computers. Select bus stops will be eventually be outfitted with electronic bus arrival monitors as well. To see where your bus is, go to [www.uctransit.info](http://www.uctransit.info)

GPS/AVL can also be used alongside transit vehicle priority technology on congested travel corridors. For example, it can work with traffic signal pre-emption equipment to give transit vehicles extended green light time.

Union City Transit service is partially funded by Measures B and BB transportation sales taxes. Measure B and BB, your tax dollars at work!
